Thursday, May 23, 2013 - 17:45

### Instrument List:

- [Green](#)

Discussion:

1. XPOL-2 performed sun calibration scans at ~20130523-1728 UTC. The radar observed the sun at the intended azimuth and elevation indicating accuracy of its current azimuth offset.

2. Starting 20130523-2102 UTC, XPOL-2 is in surveillance mode (1 low-el PPI and 1 V-point every 15 minutes).
